Advance your career in early childhood education

Our program is focused on inclusive education for young children, birth through age 8. We believe that children and teachers construct knowledge, alone and in collaboration, through interaction with the social and physical world. Our early childhood courses reflect an inquiry-based, constructivist approach to teaching and learning.

We seek to support highly reflective and responsive early childhood educators who have a deep understanding of the role of development, diversity, and culture in the lives of young children and their families.

This unique interdisciplinary, inclusive early childhood master’s program combines the strength and expertise of two departments, and allows you to specialize in one of three critical areas, or combine them.

Quick facts
- 45 credits
- MA or MS in as little as two years
- Fully online
- Focus on equity and inclusion
- Three specializations:
  - Constructivism,
  - Special Education,
  - Infant Toddler Mental Health
