Become a leader in sustainability education

The Leadership for Sustainability Education (LSE) master’s degree fosters leaders who wish to educate for sustainable and regenerative change. This program provides the opportunity to explore sustainability education and leadership through a learning community model, theory-to-practice curriculum, and ongoing community-based learning. Students attend full- or part-time, and courses are usually offered once a week in the late-afternoon or evening.

LSE courses stress the importance of ecological systems, bio-cultural diversity, social and economic justice, multicultural perspectives, transformative learning, and more. This program is perfect for any student looking to become a leader in sustainable solutions in settings that include non-profit organizations, government, higher education, schools, and businesses. LSE students graduate with the knowledge and skills needed to advocate for justice and equity, democratic participation, collaborative leadership, and the regeneration and vitality of communities and ecosystems.

In LSE, students and instructors take on the roles of both teachers and learners in a setting that is inclusive, participatory, experiential, thematic, critically questioning, place-based, and transformative.
