THE PRODUCTION AND DISPOSAL OF PLASTIC IS ONE OF THE MOST HARMFUL PROCESSES TO OUR ENVIRONMENT

Bottled water is bad for the environment

- Bottled water wastes fossil fuels in production and transport.
- Bottled water production in the United States used the energy equivalent of 32 and 54 million barrels of oil to produce and transport plastic water bottles in 2007—enough to fuel about 1.5 million cars for a year.
- Rather than being recycled, about 75 percent of the empty plastic bottles end up in our landfills, lakes, streams and oceans, where they may never fully decompose.
