A Manual for Using the Giant Map of Oregon

Logistics and Activities
Policy for Use of Oregon Giant Map

C-GEO has several Giant Maps. When you request a map we will try to reserve the Giant Map closest to your location (usually PSU, WOU or Central Oregon).

Charge for using the Giant Map:

The person who requests the Giant Map is responsible for picking it up and returning it to the same place, properly packed in the re-useable container.

For C-GEO TCs there is no fee.

For educators who are not TCs, the use fee is $25 payable to “Portland State University”, due when the map is picked up.

NOTE: When a teacher requests the Giant Map, C-GEO will confirm the reservation of the map with a letter, copied to the teacher's principal or supervisor. If the map is not returned by the due date, C-GEO will contact the principal, to request immediate return of the map. If the map is not received, the school will be invoiced for the cost of the map ($3,000).

Note: C-GEO also has a Giant World Map and a Giant US Map. Similar policies and costs apply to these maps.

Teachers who use the National Geographic Version of the Giant Map of Oregon must complete a survey upon completion of use. That survey can be located at https://www.surveymonkey.com/r/GTMstateTeacherSurvey
Reservation Request Form for the Center for Geography Education in Oregon Giant Map

Please read the policy page above, before completing this form.

Name ______________________________________________________

Email address __________________________________________________

Mobile phone __________________________________________________

School Phone __________________________________________________

Name of School ________________________________________________

School Address _________________________________________________

______________________________________________________________

Name of School Principal _________________________________________

Principal’s email address _________________________________________

You may also use this form to request the Giant U.S. or Giant World Map. Please indicate which map(s) you wish to reserve:

□ Giant Map of Oregon       □ Giant U.S.       □ Giant World

Date you wish to pick up map _____________________________________

(From PSU available 8-4:30 Monday and Wednesday and 8 – 12 Friday; other locations by arrangement)

Date you will return map _________________________________________

(From PSU available 8-4:30 Monday and Wednesday and 8 – 12 Friday; other locations by arrangement)

Please Note: Two of the Oregon giant maps were created by the National Geographic Society, and the others were created by C-GEO. Both versions are similar. When you reserve a giant map of Oregon, we will hold whichever map is available on the requested date. Teachers who use the National Geographic Version of the Giant Map of Oregon must complete a survey upon completion of use. That survey can be located at

https://www.surveymonkey.com/r/GTMstateTeacherSurvey
Confirmation Form for the Center for Geography Education in Oregon Giant Map

Date: ______________

This is to confirm that: ___________________________________________

has reserved the following C-GEO Giant Map(s)

______________________________________________________________

located at: _____________________________________________________

Date of pick up: ______________

Time of pick up: ______________

Return date: ______________  When you pick up map(s) arrange return time.

The fee for the use of the map is ______________ due at the time of pick up.

You may use a credit card or check payable to Portland State University.
Please note we cannot accept checks made out to another payee (including C-GEO).

The Giant Map is to be returned to its original pick-up location by the end of the reservation period.

Please sign below when map is picked up and fee is paid. By signing this form you indicate you have read and agree to the policy included with the reservation request form.

Signed: ______________________________________________________

Printed name: __________________________________________________
[Signed original goes to C-GEO. Copies go to reserver and principal/supervisor]

Teachers who use the National Geographic Version of the Giant Map of Oregon must complete a survey upon completion of use. That survey can be located at

https://www.surveymonkey.com/r/GTMstateTeacherSurvey
IMPORTANT THINGS TO KNOW and DO WHEN USING THE GIANT MAP

1. The Giant Map is 18’ x20’ so make sure that you have a large enough space to lay it out.

2. Remove all shoes before walking on the map!

3. Make sure that the map is clean before you roll it up. This is especially important if you used the map on the playground or on grass.

4. When you are finished, fold the map carefully and roll it up.

5. Cover the map with the material provided. Secure it with the straps provided.

6. Return the Giant Map on time.

The Giant Map is expensive and we want to make sure that it will be available to students for as long as possible. Following the instructions above will cut down on the map’s wear and tear.
Activities and Lesson Plans for the Giant Map of Oregon

Activities:

1. Comparing Your Mental Map with the Giant Map
2. Ecoregions
3. Farm Products of Oregon
4. Wildlife Habitats
5. Tour Guides
6. Stump the Audience
7. Measure up
8. The Water Cycle: The Play
9. 45th Parallel: Simon Says
10. Can you Spell Locations in Oregon?
11. Trails Across Oregon
12. Twenty Questions
13. Dam Maps
14. Watersheds

Lesson Plans:

1. Oregon Boundary Train
2. Where’s my Niche?
1. Comparing Your Mental Map with the Giant Map

Before participants see the Giant Map, give them a blank outline map of Oregon (Available on the C-GEO website) and ask them to draw their mental map of the state. Ask them to put down as much information as they know about the physical and cultural geography features of the state such as roads, mountains, cities etc. Then roll out the Giant Map.

- Ask students to compare the mental maps they drew to the Giant Map, and then answer the questions below.
- Students can work in pairs or small groups to compare their maps to each other’s and to the Giant Map.
- As a follow-up activity, collect all the original maps, and have students draw their mental map once again. They can compare their first mental map with the second.

Questions:
1. What information or features were included on both your mental map and the Giant Map?
2. What information or features were found on your map but not the Giant Map?
3. What information or features were found on the Giant Map but not your map?
4. Why do you think there are differences between your mental map and the Giant Map?
5. What’s the most important feature that you omitted (left off) your mental map? Explain why this feature was important.

2. Ecoregions

Discuss what is meant by the term ecoregions. Use the map from the Student Atlas of Oregon (page 14), to see where the nine ecoregions of Oregon are located. Using the Giant Map, have students locate themselves on each ecoregion as you call out the names. As students get more knowledgeable about places in Oregon give them clues to locate the ecoregions rather than telling them where they are located.

3. Farm Products of Oregon

1. Assign each person one of the following farm products produced in Oregon: Onions, Potatoes, Grapes, Apples, Cherries, Pears, Milk Cows
2. Ask students to look at the Farm Products Map on pages 43 and 44 of the Student Atlas of Oregon and find where the assigned product is produced.
3. On the blank map of Oregon provided, tell them to mark in the location(s) of their product and provide a key.
4. Ask them to look at the following maps to see what kinds of conditions seem best suited for the production of their assigned product (make notes on the outline map):
   - Topography (p. 15)
   - Average Annual January Temperature (p. 19)
   - Average Annual January Temperature (p. 20)
   - Average Annual Precipitation (p. 21)
5. Questions: What relationships, if any, are there between major transportation routes (page 45), population concentrations (page 38) and your product?
6. Instructions: When you arrive at the Giant Map of Oregon, stand (without shoes!) at the location or your assigned product. Be prepared to share your findings with the group.
7. Question: How might climate changes in Oregon impact your product and its location?

4. Wildlife Habitats

1. Assign each person one of the following wildlife species – Black Bear, Western Rattlesnake, Spotted Owl, Bald Eagle, American Beaver, Pronghorn, Elk, and Red-legged Frog
2. Look at the Wildlife Distribution Map on page 28 of the Student Atlas of Oregon and find your assigned species’ habitat.
3. On the blank map of Oregon provided, mark in the location(s) of your wildlife species and provide a key.
4. Look at the following maps to see what kinds of conditions seem best suited for your wildlife species (make notes on your outline map):
   - Ecoregions (p. 14)
   - Topography (p. 15)
   - Average Annual January Temperature (p. 19)
   - Average Annual January Temperature (p. 20)
   - Average Annual Precipitation (p. 21)
   - Vegetation Zones (p. 23)
   - Forests (p. 24)
5. What type of physical environment (habitat) does your assigned species need?
6. When you arrive at the Giant Map of Oregon, stand (without shoes!) at the location for your assigned species. Be prepared to share your findings with the group.
7. Question: How might climate changes in Oregon impact your species and its location?

5. Tour Guides
Divide the class into groups of two or three. Give each group a picture of a place in Oregon and have them find the place on the map. After consulting various maps in the atlas (for example, topography, precipitation, or forest lands) to learn about their location, ask each group to guide a 'tour' of their location.

6. Stump the Audience (Two options)

Option A: Using the atlas, assign each small group a 'product' of Oregon and play “Stump the Audience” game. For example, if a group is assigned 'pears', they give the rest of the class clues for where pears are raised without saying the word 'pear'. Examples of clues for 'pear' could be Columbia Gorge, used for preserves, grows on trees, also found in Southern Oregon.

When the first person thinks they know the product, have that person 'travel' to the area where the product is raised and point to it in the atlas. Caution: It can get a bit crazy IF you have competitive folks!

Option B: Give five clues for a location in Oregon and allow about two minutes for students to search for the location using the clues. After the two minutes are up, the class can help students who have not yet found their locations by providing additional clues. Then have the students read their clues and check to see if they found the correct location.

7. Measure Up

There’s a lot of math in geography. One way to illustrate that is to have students complete (individually or in small groups) the following map activities using the Giant Map or Student Atlas of Oregon:

- Use foot length, or hand span, to measure distances between places. Match the results with the scale at the bottom of the map.
- How many steps does it take to go 100 miles? (Note that answers will vary according to the size of the step. One way to do this is to take several step readings and use the mean).
- Find highways that will add up to 100, use the combination of +, -, X and divide to get to the number 33 (Oregon is the 33rd state added to the US).
- How many miles is it from place X to place Y ‘as the crow flies’? How many miles is it if you follow the road? (Use yarn to measure the distance following the roads). How are they different and why?

8. The Water Cycle: The Play
After studying the water cycle and its elements in Oregon, assign roles or characters involved in the Water Cycle (the sun, Westerly Winds, Coast Range and Cascade Mountains, Willamette Valley, etc.) to students. For example, the Westerly Winds should be off the west coast. (Check the photo on the front of this manual for a possible layout.) Have students locate assigned roles on the map and discuss the step-by-step action of the water cycle/play. Lights, Camera, Action - Have students act their parts in the play, “The Water Cycle”.

9. The 45th Parallel-Simon Says

Have students line up on the 45th parallel on the giant map. Discuss what the parallel represents. Find major Oregon cities located on the parallel. Play ‘Simon Says’ to move students across the map from the 45th parallel (Example: Simon says take 2 baby steps north, take 1 giant leap south, Simon says go west until I say stop.)

10: Can You Spell Locations of Oregon?

Give students locations in the state that are on the Giant Map in a ‘jumbled’ format and challenge them to find the location. Ask students to write a paragraph that will tell others how to get to that location from their school.

11. Trails Across Oregon

On the giant map, walk the Oregon Trail, Meek’s Cut off, Barlow Trail, Siskiyou Trail, and Applegate Trail. Have students research these trails and create a poster that shows the trail and gives information about the trail, including information from the Student Atlas of Oregon.

12. Twenty Questions

Put a picture of an Oregon location on the students’ backs without the students knowing what those locations are. Students then ask other students questions about the location on their backs. The questions can only be answered by saying, ‘yes’, ‘no’, ‘north’, ‘south’, ‘east’, or ‘west’.

13. Dam Maps
Are there dams on the Giant Map?

Have your students research reasons for dams. Ask them to count the number of dams shown on the map “Oregon Dams”. This can be found on page 33 of the Student Atlas of Oregon. Using the Giant Map, put students into small groups and assign each group a river. Ask them to arrange themselves on the map along their assigned river, wherever possible, on the spot where a dam is located. Discuss different types of dams represented, their locations, and their possible functions (flood control, storage, and hydro power, etc.). Brainstorm advantages and drawbacks of dams.

14. Watersheds

Watersheds are often a difficult concept for younger students to grasp. Before using the Giant Map, make sure that students understand what a watershed is. One suggestion is to have a water master come in and discuss watersheds and show students the boundaries of the watershed in which their school is located. Using the giant map, have students identify other watersheds in the state. Ask students to complete a worksheet that would include questions in which watersheds key Oregon cities are located.

Lesson Plans

The Oregon Boundary Train
(See PowerPoint of images along with descriptions)

I. Overview:
In this lesson students will use the Giant Map and pictures to enhance their mental map of Oregon’s boundaries and important physical and human features. Students will do this by boarding the ‘Oregon Boundary Train’ and traveling along the borders of Oregon, passing by several important physical and human features shown on the Giant Map. Through discussions students will develop a mental map of the exact and relative location of physical and human features of Oregon.

II. Subject: Geography
III. Grade level: 2-4
IV. State Content Standards:
SS.05.GE.02 Examine and understand how to prepare maps, charts, and other visual representation to locate places and interpret geographic information.
SS.05.GE.02.01 Use maps and charts to interpret geographic information
SS.05.GE.02 Use other visual representations to locate, identify, and distinguish physical and human features of places and regions
Connection to National Geography Standards:
• Standard 2: How to use mental maps to organize information about people, places, and environments.

V. Objectives:
After using discussion and movement to travel around the giant map of Oregon, students will be able to:
• create a mental map of Oregon
• compare their mental map to the giant map of Oregon
• evaluate the similarities and differences between the two

VI. Materials
• Paper, pencil, ruler, etc. to draw a mental map
• Oregon Giant Map

Time needed:
• Approximately 30-45 minutes

Background information:
Mental maps are simply the maps of various places that we store in our head. Mental maps are used to help us navigate through space. They also help us organize information about the world, see relationships between places. For example, a good mental map of South Asia can help us understand why China would be concerned about conflict between India and Pakistan over Kashmir, or why heavy industry in the U.S. Great Lakes contributes to acid deposition in the Canadian city of Toronto. Having a good mental map is more than just academic. Mental maps can ensure that you arrive on time (or even early!) and they can ensure your safety (e.g. finding your way out of a burning building, for example). Mental maps are personal, and their accuracy can vary considerably from person to person, but they can be improved by actively assessing one’s mental map, and by comparing it to “reality.”

Directions:
• In the classroom away from the Giant Map, explain what a mental map is to students.
• Provide students with a blank sheet of paper (and have extra sheets available for students who “mess up”), and tell them to draw their own mental map of Oregon.
• They should include as much detail as possible, but remind them that there is no right or wrong mental map – it is just based on what they know.
• Students also should be reminded not to worry about their drawing abilities (although they should try to be as neat as possible).
• Give students as much time as needed to complete their maps (most will finish in about 10-15 minutes).
• Move to the Giant Map. Assign several students physical and human features to stand on the map in the correct spot. Students will have a picture and 1 or 2 facts about the location. They will be the local feature travel guide.
*Instruct the rest of the students to make a line and get on board ‘The Oregon Boundary Train’. As the line moves around the boundaries discuss the directions you are moving the shapes the boundaries make and the physical and human features they pass. The assigned student feature guides will name the place and share a fact about the place. *Discussion ensues about the exact and relative location of those features on the Oregon map;
- Ask students to compare their mental maps and the Giant Map and answer the questions below.
- Students could work in pairs or small groups to compare their maps to each other’s and to the giant map.
- As a follow-up activity, you can collect all the maps, and have students draw their mental map once again to see if any change occurred.

Questions:
1. What information or features were included on both your mental map and the Giant Map?
2. What information or features were found on your map but not the Giant Map?
3. What information or features were found on the Giant Map but not your map?
4. Why do you think there are differences between your mental map and the Giant Map?
5. What’s the most important feature that you omitted (left off) your mental map? Explain why this feature was important.
6. If you have students compare their maps in groups: explain how your map compares to your classmates’ mental maps. Why do you think these differences exist?

VIII. Assessment:
The formative assessment will be teacher observation of student participation in discussions and critical analyses. The summative assessment will be the map of Oregon that they create.

Map Elements
✓ Title
✓ Easy to understand key/legend
✓ Map is visually appealing, neat, and easy to read
✓ Age appropriate number of landmarks have been correctly labeled on the map

IX. Adaptations:
This is a good vocabulary lesson for ELL students or students who are new to Oregon. Students become very familiar with the layout and the geographic features of Oregon.

X Extensions:
- Students create a travel brochure of tourists
- Students plan a family vacation in Oregon incorporating the various Oregon landmarks
Choose a physical or human feature found on the map and create a poster with illustrations and information to inform the reader of Oregon’s physical and human features

Lesson Plan Author: **Shirley Lomax**, Center for Geography Education in Oregon inspired by a lesson from **Gillian Acheson**, Texas Geographic Alliance

**Salmon** from the Pacific Ocean traveled up the Columbia River and into the **Snake River**.
Pendleton is a city famous for its big rodeo and woolen mills.
Bend is a city that has almost 300 days of sun and lots of recreation. It is between the Cascade Mountains and a desert.
Crater Lake lies inside an old volcano. It was created when Mount Mazama collapsed 7,700 years ago following a large eruption.
Hart Mountain Antelope Refuge is 65 miles northeast of Lakeview. It has pronghorn antelope, California bighorn sheep, mule deer, sage grouse, and redband trout.
Salem is located in the Willamette Valley. It is the capital city of Oregon.
There are sand dunes in **Coos Bay**.
It is a large port city.
The high canyon rims along the Owyhee River are habitat for mountain lion, bobcat, Mule Deer, California Bighorn Sheep, and a large variety of raptors.
**Portland** is the 29th largest city in the United States. It is near the meeting spot of the Willamette and Columbia Rivers.
Where’s My Niche?

I. Overview:  
In this lesson students will learn about where some familiar Oregon wildlife can be found and what their distribution is throughout Oregon. Students will do this by first defining a niche, sketching their animal and its footprint and then locating them on a Giant Map of Oregon. In discussion students will analysis the relationship of an animals’ niche to other animals and hypothesize how physical layout of Oregon affects the wildlife distribution.

II. Subject: Geography and Science

III. Grade level: 2-5

IV. State Content Standards:  
SS.05.GE.02 Examine and understand how to prepare maps, charts, and other visual representation to locate places and interpret geographic information.  
SS.05.GE.02.01 Use maps and charts to interpret geographic information  
SS.05.GE.02 Use other visual representations to locate, identify, and distinguish physical and human features of places and regions

V. Objectives:  
After viewing several different maps from the Student Atlas of Oregon, students will be able to label the nine Ecoregions on a blank outline Ecoregion map of Oregon.

After class discussion and map activities students will be able to locate one or more animal niches, identify the basic boundaries and characteristics of the niche.

VI. Materials  
- From the Student Atlas of Oregon www.studentatlasoforegon.pdx.edu copies of the following maps for each student:  
  o Wildlife Distribution  
  o Ecoregions  
- Animal Name cards-Using a list of animals listed on the Wildlife Distribution Map  
- Color pictures of the animals listed to post around the room  
- Pencils, colored pens, markers, drawing paper

VII. Presentation Steps  
1. Ask students to think of where they live. What things are found there that make it comfortable and safe for them to live there?  
2. Work with students to identify what a niche is.  
3. Instruct students to get into pairs. Have each pair draw an animal name card. Instruct students to go to the picture where their animal is shown and
draw a sketch of that animal. You might also have students look in the atlas to draw the footprint they might look for if they were searching for this animal.

4. Prepare students to find their animals on a map where there are no tracks and use other clues to find their animals. Discuss with students what clues they use on a map to locate something. *(relative location, latitudes and longitude, landmarks, etc.)* Using the handheld copy of the “Wildlife Distribution Map” have students move to the Giant Map to place themselves on the Giant Map where their assigned animal might be found. Discuss with the students what methods they used to find the niche for their animal.

5. Using the student Ecoregions map and the clues shown on the Giant Map, brainstorm the characteristics of the various niches. Ask students to talk with their partner about what their animal would need to survive in this place *(Brainstorm 3-5 things).*

6. Ask students some scenario questions-e.g.
   - What would happen if a pronghorn was moved to the southern coast?
   - Why don’t we find red legged frogs in the desert?

Invite the students to look at the Wildlife Distribution Maps and think of similar questions to share with the class.

7. Have students look at the Ecoregions of Oregon Map. Ask partners to:
   - Name another animal found in Oregon
   - Tell in which ecoregion it would be found
   - Give 1 reason why it would be found there.

**VIII. Assessment:**

Students should be assessed formatively and summatively. The formative assessment will be teacher observation of student participation in discussions and critical analyses.

For the summative assessment give students a blank map of the Ecoregions of Oregon ask them to use a word bank and locate the various regions. Then ask students to color in the niche of their animal. Encourage them to color in 3-4 more animals’ niches. On the back of the map students should list 2 or more characteristics of each niche identified.

Possible scoring suggestions for the summative assessment:
- Accuracy of locating niche
- Number of animals identified
- Thoroughness of niche characteristics

**IX. Adaptations:**

This is also a good vocabulary lesson for ELL students or students who are new to Oregon.
Partners are a good way for students to learn from one another and develop map use techniques and confidence.

**X Extensions:**
Pass out the Climographs and Average Annual Precipitation maps. Have students examine these maps and charts and their own maps of Oregon. Ask them to discuss and form conclusions how the physical layout and weather of the state affects Oregon’s wildlife distribution.

Have students answer such questions as:

a. Why is the Willamette Valley so wet?

b. Why does eastern Oregon have a different climate pattern from western Oregon?

c. How do the mountain ranges affect the climate and weather of Oregon?

Students may work in partners and then report back to the class for a large group discussion.
