## MULTIFAMILY MARKET ANALYSIS

---

EVAN ABRAMOWITZ

RMLS Student Fellow

Master of Real Estate Development Graduate Student

The strong market fundamentals persist in multifamily, but the new construction is coming. For now Portland remains one of the tightest markets in the nation with a vacancy rate of 3.55 percent. Both local and national investors are seeking to position equity, and have been drawn to the market conditions that make apartments an attractive, low-risk investment. However, with thousands of units in the planning, permitting, or construction phases, there is concern that the market could become overbuilt. According to appraiser Mark Barry: “Many developers are chomping at the bit to get back in the game. In 2013, we’re in a sweet spot. When we get into 2014 and 2015, the apartment market will be more in balance. It will no longer be a landlord’s market.”

The Barry’s forecast that rent increases will subside after mid-2013 and will flatten out over the next two years as landlords compete for tenants. They predict that apartment vacancies will increase to 4 percent to 4.5 percent by the end of this year and possibly as high as 5.5 percent by the end of 2014. This will result in a shift from a landlord’s market to a more balanced market over the next 18 to 24 months.

Multifamily construction has been ramping up, but still below 2004-2008. In 2012 there were multifamily building permits issued for 2,687 units in the tri-county area. In 2011 permits were issued for 1,696 units in the three county metro area, compared to 1,100 in 2010, according to the Barry Report. From 2004-2008 an average of 4,700 units came online annually.

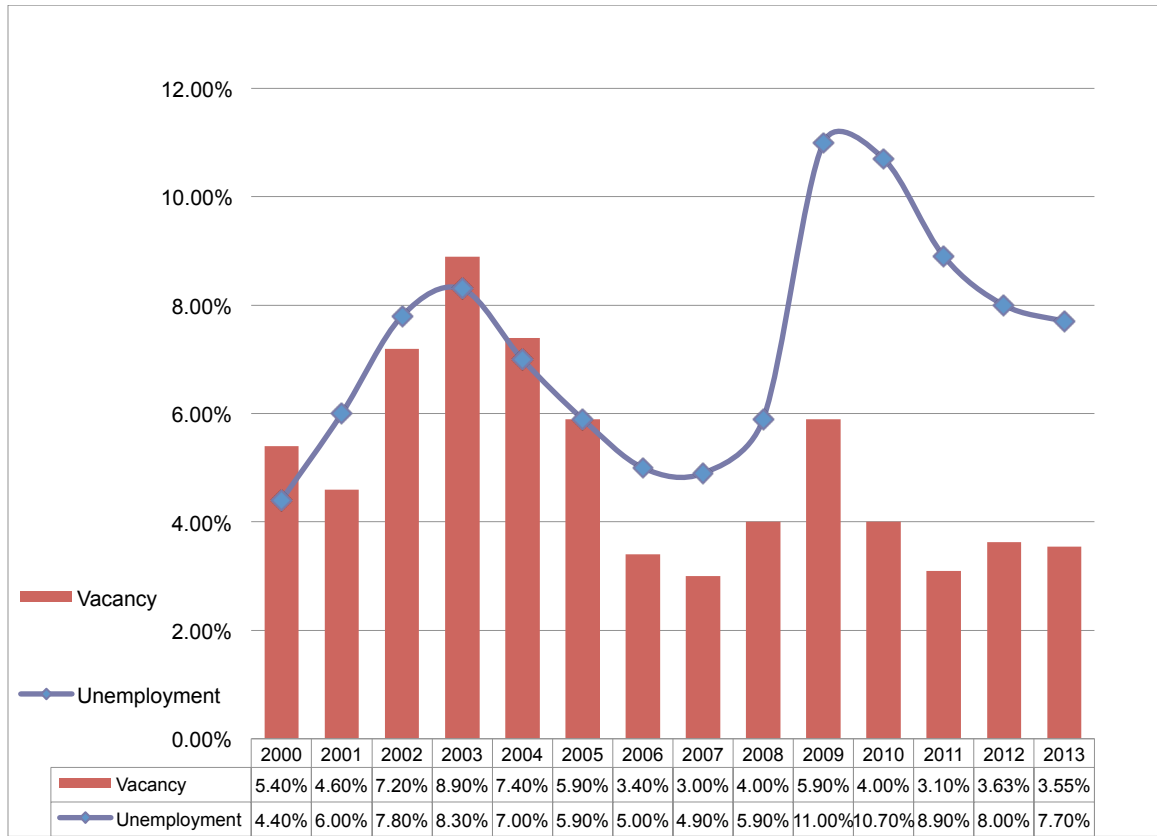

The high demand for rentals is expected to persist over the next several years and absorb the new construction projects. Strong fundamentals including low interest rates, low vacancy rates, and increasing rents have spurred new projects, as developers work to capitalize.

Axiometrics, a leading provider of apartment data and market research, reports that effective rent growth remained steady during February, at a rate of 3.53 percent, but that the pace of rent growth has been slowing in recent months. February's effective rent growth rate was the lowest since August 2010. Occupancy remained strong nationally with an average rate of 94.13 percent in February. This rate is up 35 basis points (bps) from February 2012 and 71 bps from February 2011.

“A pattern has emerged this year, as effective rent growth for Class A properties has really slowed down, Class B rates have remained relatively steady, but Class C rates have continued to increase,” said Ron Johnsey, president for Axiometrics.” Rents had been pushed so much at the upper end of the market it was inevitable we would begin to see a slowdown in growth for Class A properties, but we may also be seeing some impact from new properties coming online in certain markets. As new deliveries increase later this year and next, the trend could become even more pronounced.”

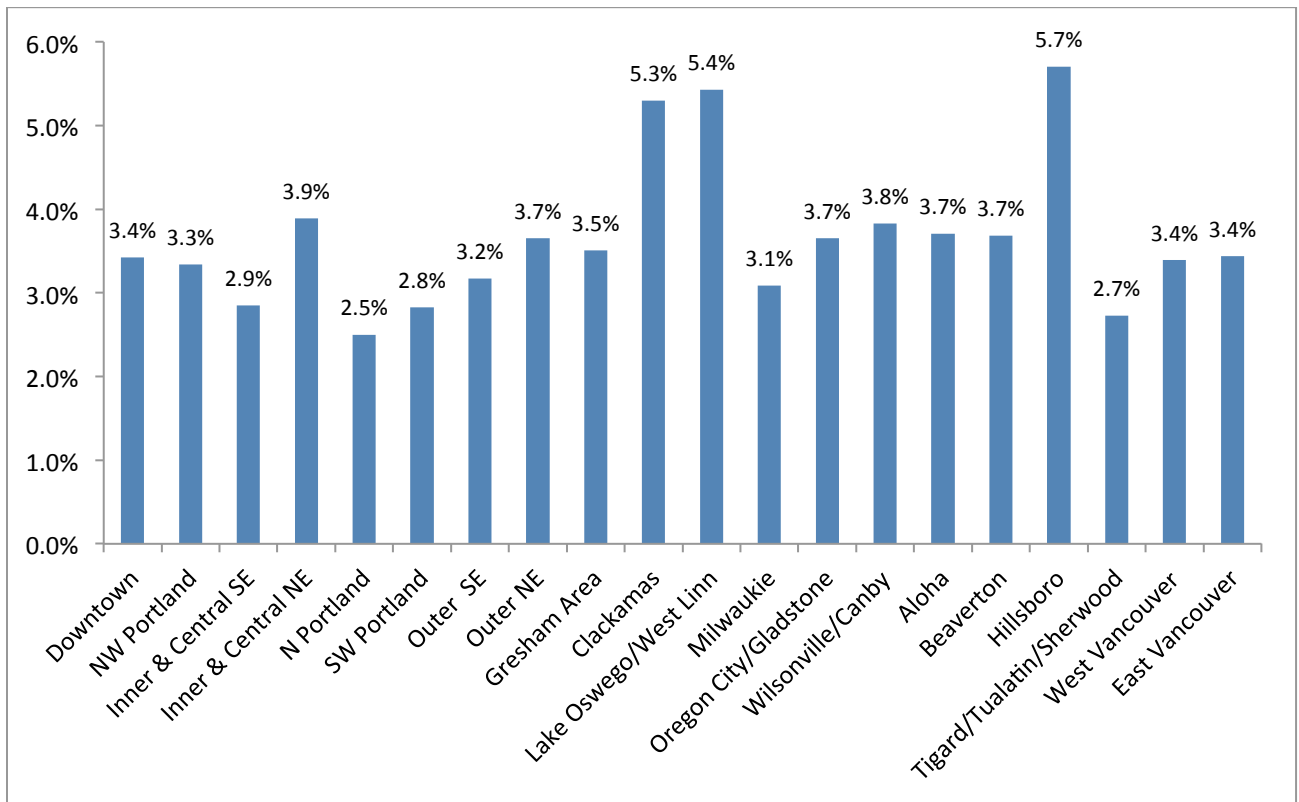

Unemployment rates are positively correlated with vacancies as shown in the chart below. Portland currently has an unemployment rate of 7.7 percent, which is lower than the state average of 8.2 percent on par with the national average of 7.6 percent.

**Figure 1: Unemployment and Multifamily Vacancy, Portland Metropolitan Area**

These market factors have driven vacancy rates in historically undersupplied Portland to among the lowest in the nation. The highest overall vacancy submarket was 5.7 percent in Hillsboro and the lowest was Inner & Central SE at 2.85 percent. The highest vacancy rate among studios was Hillsboro at 14.3 percent. The highest vacancy rate for 1 BD, 1 BA was Hillsboro at 6.9 percent, while the lowest was Outer SE with 1.95 percent. For 2 BD, 1 BA the highest vacancy was Downtown at 5.56 percent and the lowest was West Vancouver at 1.8 percent. Eight submarkets reported a 0 percent vacancy rate among 3 BD, 1 BA, but many of these were based on less than 100 units surveyed. Inner SE and Inner NE reported 0 percent for 3 BD / 2 BA, while Oregon City / Gladstone had a 12.6 percent vacancy rate for 3 BD / 2 BA.

The submarket with the highest overall rent/SF is downtown Portland with a \$1.88 average, followed by NW Portland at \$1.37. The lowest overall rent/SF is shared between Outer NE at \$0.85 per square foot. The highest rent/SF for studios was Downtown at \$1.96 and the lowest was Wilsonville / Canby at \$0.82. The highest rent/SF for 1 BD, 1 BA was Downtown at \$1.96 and the lowest was Outer North-east at \$0.92. The highest rent/SF for 2 BD, 1 BA was Downtown at \$1.55 and the lowest was \$0.82 in West Vancouver.

In Portland, approximately 70 percent of the apartments were built in the 1970s. These properties are often in the 8-60 unit range, have varying levels of deferred maintenance, and many sell in the \$50,000-\$80,000 per unit range depending on rents, location, condition, and other factors. In the first quarter of 2013 the sold price per unit was \$67,000. The average number of units sold per property was 37 in first quarter 2013 and 54 in the fourth quarter of 2012.

There have been three deals with a sales price over \$10 million thus far in 2012. The Rivercrest Meadows (338 units) in Tualatin sold for 46.6 million, Westbury (260 units) in Beaverton sold for \$28.5 million, and Fountain Park (216 units) in Beaverton sold for \$14.4 million.

In 2012 there were 162 transactions and \$541 million in sales volume compared with 161 transactions and \$813 million in 2011. Due to the solid market fundamentals, apartments remain the favored asset class of investors in Portland and throughout the nation. Experts are projecting that the increases in sales volume and transactions will continue to be strong in 2013 and over the next several years.

Through March 2013, multifamily building permits have increased within the metro area compared to 2012. Permits have been issued for 448 multifamily units built in the City, which is on pace to surpass last year’s total of 1,612. According to the Barry Report there are 8,000 new units projected in 2013 and 2014 with half of these slated for Multnomah County. Washington County has already surpassed 2012 for the number of new units this year at 765 units through March.

In the April 2013 MMHA Report Mark and Patrick Barry observed a number of trends that have emerged in new apartment construction:

- Currently there are twice as many units under construction as units that have been recently completed.
- Almost three times as many units have been proposed as recently completed.
- Close-in east Portland accounts for almost 1/3 of the proposed units.
- Very little activity in market rate apartment construction in East Multnomah County area.
- Average size is approximately 50 units in urban east side and 100 units in urban west side.

- In the suburbs, most projects under construction or recently completed are over 150 units.

Mark and Patrick Barry predict that despite the uptick in new apartment construction, the market will not become overbuilt. They emphasize the projected population growth of 25,000-30,000 per year and that the new units will be delivered in intervals. They expect that some neighborhoods will experience slow absorption, higher vacancies, and possible concessions until there is sufficient time for the new units to be absorbed. ■
