

## Population Growth in Oregon Since 2000

Oregon's population continued to grow in the period after the April 1, 2000 Census, increasing to 3,471,700 by July 1, 2001. The growth rate for the 15-month period is 1.47 percent.

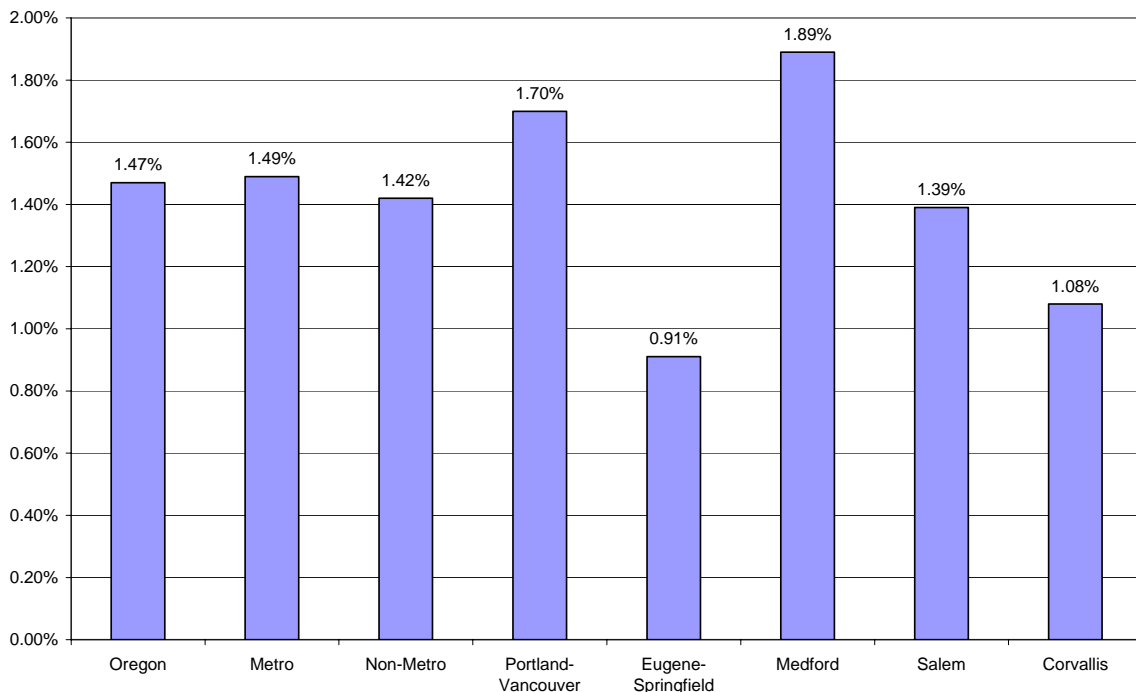

Population change consists of natural increase (births minus deaths) and net migration (people moving into the state minus people leaving the state). Between April 1, 2000 and July 1, 2001, a total of 56,704 births and 35,769 deaths were registered in Oregon, resulting in a natural increase of 20,935. Net migration, estimated at 29,366, accounted for nearly 60 percent of overall population increase. The economic downturn starting early last year did not appear to have an immediate impact on migration flows, although the effects may show up later if the unemployment in high-technology manufacturing and other sectors persists.

Oregon's metropolitan areas--which include Benton, Clackamas, Columbia, Jackson, Lane, Marion, Multnomah, Polk, Washington, and Yamhill counties--have grown at a rate of 1.49 percent since

April 2000, slightly more rapidly than the state. However, not all metropolitan areas are growing at equal rates. Medford leads the other metropolitan areas with a growth rate of 1.89 percent, followed by Portland-Vancouver (1.70 percent) and Salem (1.39 percent). The Eugene-Springfield and Corvallis metropolitan areas have grown more slowly than the state, with growth rates of 0.91 percent and 1.08 percent, respectively.

Central Oregon remains the fastest growing region in the state. Deschutes County grew by 5.79 percent during the 15-month period, followed by Crook County (3.48 percent). Jefferson County grew by 2.06 percent, ranking fourth in the state. Counties along the I-5 corridor continued to experience large population increases. Washington County had a population increase of more than 10,000 people since the 2000 census, reaching 455,800 on July 1, 2001. Clackamas County added nearly 7,000 people, and Multnomah County added 6,000. While 11 Oregon counties grew faster than the state average, the remaining 25 experienced slower or negative growth.

Growth Rates for Oregon's Metropolitan Areas, 2000-01

Rapid growth has been observed in the towns surrounding the central cities of metropolitan areas. This trend is especially evident in the metropolitan Portland area, where growth rates have been higher than the city of Portland for Happy Valley and Oregon City in Clackamas County; Beaverton, Forest Grove, Hillsboro, Sherwood, Tigard, and Tualatin in Washington County; Fairview and Troutdale in Multnomah County; and McMinnville in

Yamhill County. Evidence of the trend is found in other Oregon metropolitan areas: Keizer, Central Point, and Florence are all examples of localities that grew more rapidly than the central cities of their metropolitan areas. Some cities in non-metropolitan areas have also shown considerable growth. For instance, Bend and Redmond in Deschutes County, are among the top 20 fastest growing cities in Oregon.

## **Population Estimates for Oregon, July 1, 2001**

This report presents population estimates for Oregon and its counties and incorporated cities for July 1, 2001. The eleven tables in this report show current 2001 population estimates as well as historical data.

- Table 1 presents the components of population change for the state of Oregon, from April 1, 1960 to July 1, 2001.
- Table 2 shows the population by area types and the population for specific metropolitan areas from April 1, 1990 to July 1, 2001.
- Table 3 shows the components of population change for Oregon's counties, from April 1, 2000 to July 1, 2001.
- Table 4 shows the population size for the state of Oregon and its counties and incorporated cities, from April 1, 1990 to July 1, 2001.
- Table 5 shows population information on Oregon's incorporated cities that are located in more than one county.
- Table 6 presents the rank of Oregon's incorporated cities by their July 1, 2001 population size.
- Table 7 offers an alphabetical listing of Oregon's incorporated cities with their estimate of population size on July 1, 2001 and the change between April 1, 2000 and July 1, 2001.
- Table 8 presents information on the population added to incorporated cities due to annexation between April 1, 2000 and July 1, 2001.
- Table 9 displays estimates for the population by age and sex for the state of Oregon and its counties for July 1, 2001.
- Table 10 shows estimates for the population by selected age groups (birth to 17 years of age, 18 to 64 years of age, and 65 years of age and older) for the state of Oregon and its counties for July 1, 2001.
- Table 11 presents the revised intercensal population estimates for Oregon and its counties, 1990-2000.

### **State Requirements for Population Estimates**

Oregon law (Oregon Regulatory Statutes 190.510 to 190.610) mandates the Population Research Center, Portland State University, acting on behalf of the State Board of Higher Education, to prepare annual population estimates for each county and incorporated city in the state of Oregon. The principal purpose of the population estimates is for the allocation of selected tax revenues to cities and counties.

The state government organized a State Census Office in Portland in 1956. The purpose of the State Census Office was to oversee and certify special censuses that rapidly growing towns conducted in order to document their population figures. The State Census Office eventually expanded its role to include the certification of the population added by annexations and the preparation of annual population estimates for counties.

Administrative responsibilities for population estimates were transferred to Portland State University in 1965, when the unit changed its name to the present one. The Population Research Center is located within the College of Urban and Public Affairs.

### **Duties of the Population Center**

In addition to preparing population estimates and projections, the Center houses the Oregon State Data Center, the lead agency in Oregon for contact and collaboration with the U.S. Bureau of the Census and for dissemination of census data and documents. This information includes current and past census data for Oregon as well as results from Census Bureau surveys.

The Population Center provides a research and teaching focus for the investigation of the causes and consequences of demographic change in current society. Typical research activities include enrollment forecasts for school districts, survey research on population issues, social and economic factors affecting demographic change, population distribution and migration, population geography, and demographic methods. Population staff regularly assist city, county, and state governments on examination of population issues.

Staff in the Population Center teach in the School of Urban Studies and Planning, College of Urban and Public Affairs. The School of Urban Studies and Planning offers a graduate certificate program in applied demography, an applied demography curriculum in the Master of Urban Studies degree program, and a graduate concentration within applied demography in the Ph.D. program.

### **Methods for Population Estimates**

We include all residents in cities, counties, and the state in the population estimates. Residents include people living in their own homes, rental homes or apartments, mobile homes, or in college dormitories, nursing homes, jails and prisons, and other group quarters. We consider college students to be residents of the place where they live while attending college. We count seasonal residents as living at the place that they consider to be their usual residence.

We have developed methods for Oregon's population estimates to be as accurate as possible. Toward this goal, we work closely with state, county, and city officials, requesting information from them and inviting their review of our methods and estimates.

For estimates for the state population, we rely on the registration of births and deaths for an estimate of natural increase (the excess of births minus deaths). We use school enrollments data for an estimate of net migration for the population under 18 years, non-farm payroll information for the population aged 18 to 64, and Medicare data for the population aged 65 and older.

We base county population estimates on a method called ratio correlation. The ratio correlation method relates changes since the last census to changes in state tax returns, school enrollments, births, and voter registration. We track changes in each of these types of administrative data to make an estimate of the current county populations. We also examine changes in the housing stock as a check on the accuracy of the county estimates.

We determine city population estimates based on changes in the housing stock. City officials report each year on the changes in their city's housing stock (for single family units, multi-unit residents, and mobile homes) and the number of persons residing in group quarters. We also take into account any population changes that have been due to annexations. We separately estimate possible changes due to the number of people per housing unit

and use this information to prepare the city's final population estimate.

We monitor city annexations throughout the year. We are informed about annexations by the office of the Secretary of State. When an annexation occurs, we contact city officials to find out the number of residential housing units and population, if any, involved in the annexation. If the annexation added people to the city's population, then we certify an updated city population on a quarterly basis, in a special report to the Secretary of State's office.

We base annual July 1 population estimates on administrative data available to us in September and October each year. We prepare preliminary estimates for cities and counties in mid-November. Based on reviews that we receive from city and county officials, we revise the annual population estimates and release final population estimates in December. When done, we release the city and county estimates on our Population Research Center website. We publish all estimates in this report, generally available in March each year.

### **Acknowledgement**

This report was prepared under the general direction of Qian Cai, manager of the population estimates and projections unit of the Population Research Center. Professional consultation was provided by Barry Edmonston, director of the Population Research Center, and George Hough Jr., manager of the Oregon State Data Center of the Population Research Center. Edie Timmermans and Nina Shockman provided help on report preparation and distribution.
