OUR MISSION:

To promote sustainable agriculture as a long-term solution to major environmental issues facing the overall health of the world’s soil, water and people.

Our aim is to develop future farmers and gardeners by providing the technical and financial support necessary to learn how to grow local organic food.
Small Farm Apprentice Program (SFAP)

Offers hands-on training opportunities for future farmers to learn the skills necessary to operate an organic farm with an emphasis on community education and charitable support to those in need.

For those with a more homesteading or food security mindset, our farm serves as a demonstration plot so they can learn the tricks of the trade that they can apply to their home efforts for improved efficiency and success.
Garden Education Program (GEP)

Reaches out to schools, students, and their families through innovative educational opportunities to learn sustainable practices implemented by organic farmers.

Establishes on-site educational gardens for direct, hands-on learning experiences geared towards teaching individuals, groups and businesses/organizations how to raise food for their own subsistence.

Participates in community events (farmer's markets, festivals, etc) to offer support and education.
Gift Gardens for Healthy Harvest Program (GHP)

Promotes food security for low-income families by providing the start-up materials and training to be able to grow their own fresh, nutritious food.

Provides organic fruits and vegetables to food banks in order to give those in need a healthy diet.

Offers local, premium, organic food to schools at conventional prices where schools must buy from the least expensive supplier (future goal - funding dependent).
